

Abstract of the Disclosure

An optically semi-transmission reflection material comprises a resinous film comprising a thermoplastic resin, wherein the sum of total light ray transmittance,  $T\%$ , and total light ray reflectance,  $R\%$ , i.e.,  $T+R$ , is 80 to 100%; an absolute value of their difference is  $|T - R| < 50\%$ ; when displayed value  $a$  and displayed value  $b$  in transmitted light are designated as  $a_T$  and  $b_T$ , respectively, and when in reflected light, displayed value  $b$  is designated as  $b_r$ , in the transmitted light,  $a_T$  and  $b_T$  are in the range of  $-2 \leq a_T \leq 2$ , and  $-2 \leq b_T \leq 1.3$  and the difference between the displayed value  $b$  of the transmitted light and the reflected light is  $|b_T - b_r| < 10$ .
